Industry

Automotive sector producers make substantial use of transport trains, called milk runs, for internal transport. These milk runs consist of pallet bases with four caster wheels. Until now, it has not been possible to move these trolleys in a safe and rapid manner. The development of our RZ (Routenzüg) machine has caused a change here.

Food & Pharma

Gaps and seams in machinery are fatal for the pharmaceutical industry in particular. For that reason, Movexx has developed a series of Clean Room machines completely made of stainless steel. The laser welding technology ensures that dirt and bacteria have no chance of accumulating.

Retail & Distribution

Internet sales are rising by the day. By contrast, the orders themselves are constantly reducing in size. The option of fully automated order picking is consequently also reduced. Movexx has placed on the market two platform machines and an M-Runner especially for this development. Platform machines make staff very flexible. He or she does not need to walk, and getting on and off is very simple. The M-Runner also provides for several orders to be collected simultaneously.

Airports

Nowhere are luggage and goods dragged around more than at international airports. Movexx has come up with several solutions to allow this process to take place as easily and efficiently as possible. The T1000 and T2500 platform machines have been equipped with remote radio control, so that the work can be carried out with one instead of two or three staff.

Waste

The waste sector is under intense cost pressure. Along with our client Gansewinkel, we went in search of a solution to collecting commercial and industrial waste with one instead of two staff. This became the one2move machine, which can be attached behind the collecting vehicle or placed in a storage box at the side of the truck. Together with remote control by radio, this is the solution to reducing staff and saving costs.

Hospitals

A healthy and ergonomic work environment is of vital importance in hospitals and care homes. There is heavy physical labour, for instance in moving hospital beds. Movexx has developed a simple 'bed mover' by means of which a large number of bed types can be moved. This helps to lighten the load, to reduce the number of staff and to cut costs. Working more efficiently as a result.
