

Features

Benefits

Controlled screw thrust with positive screw extension.

The operator can position the fastener easily before screwdriving.

Controlled down assist feature requires no operator down pressure

Keeps the bit engaged and reduces fatigue, especially on self tapping applications.

Optional encoders provide positional feedback to ID specific fastener positions.

Encoders allow screwdriving sequence to be monitored.

Unique long narrow jaws allow access in areas not possible with other hand pieces.

Improves visibility on crowded assemblies with restricted access.

Conveniently positioned trigger on the hand piece provides remote start for air or DC tools.

Provides operator control with less than 8 oz. to activate trigger.

Rework control allows retorquing without screw feeding

May be used to retorque by operating a switch mounted on the hand piece.
