

Connecting Your Tools Can Be Easy (Despite What Some People Say)

Ryan Kuhlenbeck *Co-Founder and CEO* Pico MES

Mechanical Engineer with 22 years of experience on the automotive plant floor

Solving unique problems for innovative companies, including

- Improving traceability capabilities with tier 2 & 3 suppliers
- Maximizing efficiency for electric motorcycle & car production

Recognize the importance of small & midsize companies in the supply chain

Made it a mission to provide all the opportunities to companies of all size after witnessing that there was not a tool that captures the unique needs of this market.

On a mission to improve small towns

- Including Bloomington, IL[] where I live
- Wife, Amanda, and son, Cole (16 months)

Historical means of data collection

Manual & siloed

Time-consuming

Error-prone

10% bad data = 100% bad data

Historical means of quality control

Manual QC checks

A few points in the line

Errors identified later in the process

0%

Effectiveness of asking people to be more perfect

Insanity: Doing the same thing over and over again and expecting different results.

Why is this important?

There's a lot of opportunity to improve; those who do it fastest win Technology has made connectivity and data more available than ever The US can now compete with overseas manufacturers for risk

mitigation but need to incorporate quality & efficiency improvements

85% + World-Class Efficiency

It's a new world with new technology

DO YOU BELIEVE FACTORIES WILL HAVE LESS CONNECTED TOOLS OR MORE CONNECTED TOOLS IN THE FUTURE?

How tools may be connected

Full-time coder/IT team sets up tools from scratch, every time, and connects them to internal systems Consultants are hired to create connections for the company Link tools with other internal systems

Or you can go through a different type of system

Pico MES was designed by engineers for engineers

Tool connectivity is a few steps

Hundreds of tools already connected

Data feeds into centralized source, consolidating results for entire plant

Scan tool | Zebra Printer | Torque Tool

Scan Tools

- USB HID (Human Interface Device)
- same driver as keyboard, mouse, touchscreen, etc
- supported by nearly all operating systems
- open source libraries in Node.js,
 Python, and more
- data sent on every key press and release
- some support serial as well *(can be used to remotely trigger scanner)

Benefits

- tracks individual sku numbers
- eliminate manual entry errors
- key pace point for tracking time

Printers

- Standard printer drivers (IPP)
- USB and Serial options
- ZPL programming language to format text fields,
 - barcodes, QR codes, graphics, etc
- saved as plain text files

^XA~TA000~JSN^LT0^MNW^MTT^PON^PMN^LH0,0^JMA^PR4,4~SD20^JUS^LRN^CI0^XZ ^XA^MMT^PW600^LL0374^LS0 ^FT26,253^BQN,2,4 ^FH\^FDQA,100008-3-A1-96A3B225^FS ^FT25,273^A@N,29,29,TT0003M_^FH\^CI17^F8^FD100008-3-A1-96A3B225^FS^CI0 ^FT25,306^A@N,29,29,TT0003M_^FH\^CI17^F8^FDAssembly, Complete, Base Hub, 4, 2GB^FS^CI0 ^FT23,339^A@N,29,29,TT0003M_^FH\^CI17^F8^FDMAC: E4:5F:01:9F:08:1C[1E]^FS^CI0 ^PQ1,0,1,Y^XZ

Benefits

- serialized parts tagged for traceability
- print on demand with up to date information
- saves time through elimination of manual steps

Torque Tools

- Open Protocol most common
- Ethernet TCP/IP (supported by most program languages)
- supported by most torque controllers
- data sent/received based on message IDs
- subscribe to events (torque results)
- command PSET selection and tool enable/disable

0385006100200000000010179020003ESCIC-PCM079 04No BCode 0500010600107020800000090000100000011112213114115116117118119120000000000002100189022002 3102300210024002114250000026320002700000280001329000003000003100000320003300034000350 0000036000000370000003800000039000000400000004100000059354200000430000044SP19G18085 452022-10-24:13:58:50462022-10-24:13:56:53

Benefits

- exact torque can be set and confirmed based on process
- torque data captured in context

Key things to look for when it comes to tool connectivity

Tool Selection & Setup

- Pick the right tool for the job
- □ Speed of setup
- □ Factory team can use/adjust

DATA AVAILABILITY

- Integrated with the operator experience
- □ Immediate feedback on errors
- Speed of data to knowledge for continuous improvement

10-15% output improvement by integrating the experience with the operator

Another 20-30% of incremental yield improvements
