

# YOUR PARTNER FOR **Automated** Assembly

With over 75 years of experience designing, building, and installing automation systems and equipment, The Arthur G Russell Company (AGR) has helped get thousands of products into the marketplace.

We know that quality and dependability are as important on the assembly line as in the final product. That's why we work with you from the start, custom designing an automation system that will exceed your expectations and be flexible enough to grow with you as your product demands change.

**Design, build, install, and support turnkey automation equipment**

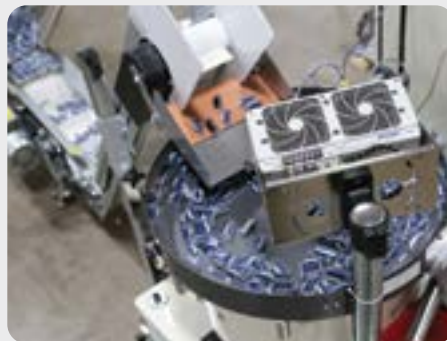

Assembly, test and packaging systems for complex multiple part and process products

High speed parts feeding, inspection and loading for packaging operations

Proprietary line of vibratory, multiple lane and rotary parts feeding systems

## Keeping You Running

AGR is widely known for engineering and building automation systems that reliably meet product demands. But our expertise doesn't stop there—we understand current trends that could disrupt production strides. **We've developed value-added options to keep your production lines operating at high OEE and help minimize the issues that cause costly downtime.**

**Industries with the toughest demands trust AGR.** From medical devices to electronics to consumer goods, we'll design and fabricate a machine that's precise and ultra-fast.

With the addition of their AGR machine, this global medical device company:

- went from two shifts to one
- increased production six-fold
- realized a cost savings of over \$400,000 a year
